

What is claimed is:

1. A ball tossing apparatus comprising:
a ball dispenser; and
a pivoting ball deflector.
2. The ball tossing apparatus of claim 1 wherein said pivoting ball deflector comprises:
a frame;
a rotatable resilient member; and
means for affixing said rotatable resilient member to said frame.
3. The ball tossing apparatus of claim 1 wherein said pivoting ball deflector is detached from said ball dispenser.
4. The pivoting ball deflector of claim 2 wherein said frame encases said rotatable resilient member.
5. The pivoting ball deflector of claim 2 wherein said frame contacts said rotatable resilient member in at least one point.
6. The pivoting ball deflector of claim 2 wherein said frame supports said rotatable resilient member such that said rotatable resilient member pivots about an axis.
7. The pivoting ball deflector of claim 2 wherein said affixing means can secure said rotatable resilient member at a predetermined angle about an axis.

8. The pivoting ball deflector of claim 2 further comprising a locking mechanism that can secure said rotatable resilient member to said frame at a predetermined angle about an axis.
9. The pivoting ball deflector of claim 2 wherein said rotatable resilient member is a net composed of either polymers, gut, strings, threads, cords, fibers, filaments or any other elastic substance capable of deflecting a ball.
10. The pivoting ball deflector of claim 2 wherein the rotatable resilient member comprises cloth.
11. The ball tossing apparatus of claim 1 wherein said ball dispenser comprises:
 - a releaser having a first position retaining balls and a second position that releases a ball; and
 - a pivotable lever that manipulates the releaser between said first position and said second position.
